TRANSPORT FLOW

CLEAR SCHEDULES.
LESS WAITING.

01 DESCRIPTION

Public transport users often don't have up-to-date information on bus and train schedules, and delays are usually only known when they arrive at the stop, causing wasted time and frustration.

TransportFlow is a digital platform that lets users check daily transport schedules, view real-time updates, and know when a bus or train is delayed. Users can sign in to access personalized routes and stop information. The system also allows authorized transport staff to report delays and update trip information so passengers always have accurate data.

02 CORE FEATURES

- View daily bus and train schedules with updated timings.
- Get real-time updates on delays and schedule changes.
- Secure sign-in for both users and authorized transport staff.
- Save favorite routes and frequently used stops.
- Access information about lines, stops, and timings.
- Allow staff to report delays and update trip status.
- Receive notifications for delays and important route updates.

03 DELIVERABLES

- Source Code (Github)
- Working Application
- README documentation
- Presentation slides
- Technical Documentation

04 SUGGESTED TECHNOLOGY STACK

Frontend	Flutter / React Native
Backend	Node.js , Express.js
Database	PostgreSQL , Redis
Real-Time Updates	WebSockets

05 TECHNICAL OBJECTIVES

- CRUD operations
- Authentication & Authorization
- Mobile app development
- Real-time data handling
- Map & geolocation integration
- Database Design & Management
- Push notifications & live updates

06 PROJECT DETAILS

Category	Smart Cities / Mobile Dev
Team Size	1 - 4 Members
Duration	3 - 5 Weeks

IMPORTANT NOTE

The proposed solution and suggested features are intended to serve as a guideline rather than a strict implementation plan. Participants are free to choose any technologies, frameworks, architectures, or tools they consider appropriate for the project. Teams may also extend the project with additional features, improve existing functionality, or introduce modifications to the proposed solution, provided that the project's core objectives and requirements are respected.
